

Key facts

Dataset: MURA musculoskeletal radiographs

Total studies: 14,863

Normal studies: 9,045

Abnormal studies: 5,818

Input size used in the notebook: 256 x 256

Model coverage

CNN variants: 4

VGG variants: 2

ResNet variants: 2

DenseNet variants: 5

Total model sections: 13

Notebook flow

1. Load and label data from the MURA directory structure.
2. Resize and normalize images, with optional augmentation.
3. Train multiple CNN, VGG, ResNet, and DenseNet architectures.
4. Evaluate with AUC, accuracy, and Cohen's kappa.

Correction note

This PDF replaces the incorrect attachment with a clean, notebook-derived report.

It is intentionally concise so it can be used as a dependable reference alongside the website.

Label balance chart

The bar lengths are scaled to the notebook-provided counts
